

List of ADMET studies

From Translational Research Team

Required ADMET studies for Preclinical Entry

Category	Study		Status
DMPK	Absorption	Cell perm. & P-gp substrate	ER 0.49, no efflux
		Mouse PK (IV&PO)	F 60%
		Rat PK (IV&PO)	F 79%
		Dog PK (IV&PO)	F 87%
		Monkey PK (IV&PO)	Partial – PO PK/TK
	Distribution	BBB	B/P: mouse 0.43-0.49; rat 0.82-1.14
		Brain tissue binding (H/R/D)	98% bound
		Plasma protein binding (H/M/R/D/P)	97–99% bound
	Metabolism	Liver microsome stability (H/M/R/D/P)	82–93% remaining
		Hepatocyte clearance (H/M/R/D/P)	Not conducted
		Metabolite PF/in vitro Met ID (H/M/R/D/P)	Completed
	DDI	Microsomal protein binding	Not conducted
		CYP Inhibition / Induction	Inhibition (IC ₅₀ 18-96 μM) Induction N/A
		Reaction phenotyping	Major: CYP1A1
Human PK prediction		Not conducted	

Category	Study		Status
SnT	General Toxicity	Rodent single dose toxicity	Completed (ALD >2000 mg/kg)
		Rodent 5-day repeated dose toxicity	Not conducted
		Rodent 14-day repeated dose toxicity + TK	Completed (MTD 400 mg/kg)
		Non-rodent dose escalation toxicity	Completed (MTD >200 mg/kg)
	Genotoxicity	Ames (or mini-Ames)	Completed (Negative)
		In vitro MN or CA	Completed (Negative)
		In vivo MN (rodent)	Completed (Negative)
	CV Safety	hERG assay	Completed (Max 32% @20 µM)
		Cardiac ion channel (Nav1.5, Cav1.2) in silico APD prediction	Completed (IC ₅₀ >100 µM) In silico N/A
		MEA (multiple electrode array)	Not conducted
